

CLOUD LOCK

Eliminate common problems with normal locks & keys. Our Cloud Lock platform with smart locks gives you full control to protect your business assets.

No more problems with lost keys, duplication, and more.

Normal keys for padlocks/door locks can be stolen, duplicated, or misplaced. It is costly in terms of time and money to replace locks every time a key is lost or there are unauthorised duplication, especially for companies with a lot of assets to protect.

Digital keys store all the data of who, when, and where.

Our smart locks use digital keys that can do things normal locks can't. You can see who opened what locks, when, and where. You can cancel and re-issue new keys without changing the locks, on an unlimited number of times.

Take back full control.

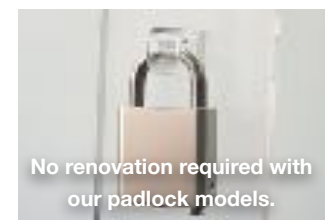

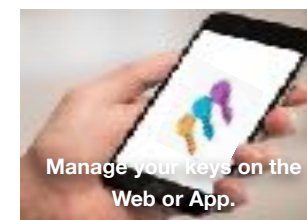

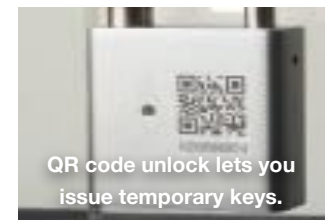

All data is stored on the cloud so you have easy access to it anytime, anywhere, and in real-time. Our Cloud Lock platform centralises everything so you can assign roles, create clearance levels, set locking rules, issue/revoke keys, and generate reports.

What is Cloud Lock?

Cloud Lock is our unique solution of smart locks with Internet-of-Things (IoT) platform. Our smart locks come in several form such as padlocks, door, and cabinet locks. They use digital keys stored on a Bluetooth key, smartphone app, and QR codes.

Cloud Lock is available as padlocks, door, and cabinet locks. Ready to use without renovation or modification.

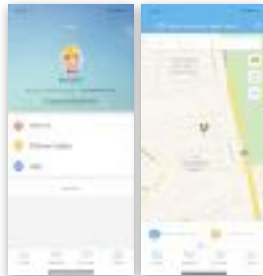

No More Lost Keys & Duplication Issues.

Normal locks need to be replaced when keys are lost or duplicated. Our digital keys can be revoked and re-issued instantly & safely.

Keep track of keys, locks, and history on the Web/App.

All data is kept in the cloud, so you can access it anytime & anywhere. You can create different user profiles, issue & revoke keys, generate reports, and integrate with other systems such as CCTV, and more.

Eliminate Bottlenecks & Keys Control Problems.

There is no need to store and manage hundreds of physical keys (in different shapes and sizes) that can cause money & delays in your company.

Track Who, When & Where a Key Is Used.

Every action is recorded & uploaded to the platform on the cloud. This lets you explore all the history data and detect abnormal/unscheduled events.

Pre-Authorised and Temporary Keys

You can grant temporary access to persons who don't normally hold your keys. Without physical keys they can't illegally duplicate or misuse it.

Endless Industrial and Commercial Applications.

Snapshot: Improving business operations & security.

Use the Snapshot feature of our app to keep photo evidence & GPS data every time someone access the smart locks. Inspect contractor work quality and monitor equipment remotely on the Web/App.
